IRB FRAMEWORK

TNB PLANS INVESTMENT OF RM22B

Company incorporating sustainability through modernisation of national grid

TENAGA Nasional Bhd (TNB) plans to invest RM22 billion from next year to 2024 under the Incentive-Based Regulation (IBR) framework to develop the national grid.

Deputy Energy and Natural Resources Minister Datuk Ali Biju said, however, this was subject to government approval.

"This will be done by connecting the entire value chain, from generation to delivery and distribution to the customers' premises," he said at the International Conference on Learning and Development, here, yesterday.

Ali said TNB was incorporating sustainability in its network through the modernisation of the national grid.

The national utility had made great strides in preparing for energy transition with the "Reimagining TNB" initiative introduced in 2016, he added.

"This strategic initiative addresses TNB's significant step towards embracing sustainability and its commitment to continuously prioritise investment in modernising the national grid."

He said in support of the country's goal of 31 per cent of renewable energy (RE) capacity by 2025, the national grid must be ready to support dynamic two-way energy flow while maintaining voltage stability.

TNB chief regulatory and stakeholder management officer Datuk Roslan Ab Rahman said it remained committed to investing in energy transition to provide economic support to the government.

"We are undertaking investments to address climate change while doing what is necessary to stimulate economic recovery."

Tenaga Nasional Bhd says it will remain committed to investing in energy transition to provide economic support to the government.
